Introduction to Application

My Journey is a map-based mobile application that transforms how people record and share their experiences of the physical world. At its heart, it sits at the intersection of a personal diary and a community discovery platform. My Journey is a connected environment tool that turns real-world movement into a living and evolving memoir.

Using GPS and the device accelerometer, the app continuously tracks where users have been, revealing explored areas through a fog-of-war overlay that makes every journey feel like an unfolding story. Users can check in at meaningful places, such as restaurants, landmarks, hidden gems, attaching labels, photos, notes, and real-time weather data captured at the moment of arrival, building a rich, contextual record of their lives.

Beyond personal memory, My Journey connects people. Locations can be shared to social media as branded cards or posted to a public community noticeboard, where others can discover and import them, turning private memories into shared recommendations. A friends leaderboard adds a playful layer of competition, encouraging users to keep exploring.

The app integrates Google Maps, OpenWeatherMap, Firebase Authentication, and Firestore, with on-device SQLite for offline resilience, demonstrating a seamlessly connected experience that bridges the physical and digital worlds.
